ARTBA provides this course with the support of the FHWA grant. It is essential for anyone involved in the roadway construction industry in the USA and its territories.

This four-hour comprehensive course addresses the critical safety challenges in roadway construction, including:

- **Runovers and Backovers, and Internal Traffic Control Plans:** This section provides strategies and plans to reduce traffic incidents inside and outside the work zones. Traffic incidents are the leading cause of fatalities in the roadway construction industry.
 - **Engagement:** Participants must complete pre-tests, post-tests, and evaluations. Each student should have a two-way audio and visual connection for virtual sessions.
 - **Duration:** A single 4-hour session with a ten-minute break.
-

Eligibility: Open to workers, professionals, and leaders in the roadway construction industry.
